

Shoulder Mount Adaptor for Panasonic AG-DVX200

ST-7RP200

Specification: ● V-Mount Battery Mount Input ● 1x 4-Pin XLR (12V) Input ● 2x D-Tap (50W) Outputs ● 1x Hirose (12V/8.4V) Output ● 1x 4-Pin XLR (12V) Output ● 3x BNC Junction Terminal ● Weight of Adaptor: 1.5 kg ● Storage Temperature: -20°C - 60°C

Included: ● 1x ST-7R Shoulder Adaptor ● 1x DC-DVX200 DC Cable ● 1x User Manual

All-New ST-7 Shoulder Mount Adaptor Designed for Panasonic AG-DVX200

Developed in partnership with Panasonic, the ST-7RP200 has been designed to work specifically with the AG-DVX200.

Combining the DVX200 with a Protech shoulder mount adaptor allows the camera to feel and operate like a true ENG-style camcorder.

Professional Power Solution Using V-Mount Batteries

Built directly to the back of the ST-7RP200 is an industry standard V-Mount battery plate. Using the supplied DC-DVX200 power cable, it's possible to power the camera using regular V-Mount batteries.

In addition to powering the camera, the V-Mount battery acts as a counterbalance, further improving the stability and comfort for shoulder mounted operation.

Dual D-Tap Power Outputs

Accessories can be powered using one of two D-Tap outputs, with one of these ports conveniently located on the ST-7RP200 top handle.

This positioning allows easy access to power accessories mounted here, such as a camera top light.

4-Pin XLR Input & Output

In addition to the two D-Tap power ports, the ST-7RP200 features two 4-pin XLR connectors - one input and one output.

The 4-pin XLR input means the camera can be powered in studio scenarios, bypassing the need for batteries, whilst the output allows standard XLR cabled accessories to be powered.

BNC Junction Terminal

For convenient access, the ST-7RP200 features an array of BNC junction connectors.

Using separate BNC cables, operators can quickly and easily connect to the camera's SDI signal.

Strong Die-Cast Frame

The aluminium die-cast frame has been designed to be strong, durable, yet lightweight. It's naturally well balanced, further adding to the ergonomics for shoulder mounted shooting.

When installed, the ST-7RP200 feels like it's naturally part of the camera.

Ergonomic Operability

Providing camera operators with an ergonomic shooting package is at the heart of what the ST-7RP200 strives to achieve.

Fine details, such as the contoured top handle and soft shoulder pad add up to an overall package that puts users comfort first.

VCT Quick-Release System Compatibility

To ensure quick and convenient transition from tripod to mobile operation, the ST-7RP200 is fully compatible with all standard VCT quick-release tripod plates.

It features both front and back locking, meaning there are no issues with insecure fitting or twisting.
